

The jellyroll (or stack of electrodes) of commercial lithium-ion batteries in the current market is a multi-layered structure (see Fig. 2a), and a single repeatable unit consists of a cathode, an anode, and two layers of separator. Further, the cathode is made of an aluminum foil coated on both sides by an active material with a binder.

The Survivors History Group was founded in April 2005 to value and celebrate the contribution that mental health service users/survivors have made and are making to history. It is working towards a comprehensive history on this site and in a book. It will also preserve historical material in digital form on this site, and in printed and other forms.
