However, gravity has an effect on the shape of the polymer droplet and the Taylor cone. This causes a difference in electrospinning parameters observed in horizontal and vertical systems Figure 6. In the vertical system, the shape of the droplet forming on the needle tip depends on the flatness of the needle tip.

Of all these methods, electrospinning tends to have the most remarkable effects in relation to the size and shape of fibers, which is similar to the extracellular matrix (ECM).

Studies have been conducted on the effects of solution compositions and electrospinning conditions on the morphologies of the electrospun polymer fibers; of particular interest are the effects on fiber diameters the and the formation of beads on the fibers. But the effects of solution compositions of PdCl.

causes a difference in electrospinning parameters observed in horizontal and vertical systems.29 However, among the more than 10000 publications on electrospinning to date, the attention paid to the effects of the electrospinning setup on the experimental parameters and fiber morphology and diameter is astonishingly low. There have been

of electrospinning on these polymers is investigated and a production of uniform structure is observed. Additionally, an influence of electric field on its production is explored. Experimental Setup Method In this work, in order to product of a nanofiber, electrospinning device is designed and fabricated. Figure 1 shows a schematic design of ...

To study the effect of the nozzle geometry on Taylor cone formation, three types of nozzles with different outlet shapes were employed for PAN electrospinning. Typical nozzles were varied into three different nozzle configurations including flat tip ( $180^\circ$ ), standard tip and sawtooth tip ( $30^\circ$ ) as demonstrated in Figure 2.
