Current harmonics. In a normal alternating current power system, the current varies sinusoidally at a specific frequency, usually 50 or 60 hertz. When a linear electrical load is connected to the system, it draws a sinusoidal current at the same frequency as the voltage (though usually not in phase with the voltage).. Current harmonics are caused by non-linear loads.

Harmonics (electrical power) - Wikipedia

An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and winding currents to generate force in the form of rotation. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers, or by alternating current (AC ...

Electric motor - Wikipedia

About the Program The three-year Electrical Engineering Technology program has been designed to provide students with both theoretical and practical experience, enabling them to work in a wide variety of electrical engineering areas including power systems and process control.

Electrical Engineering Technology Program & Courses

ANSI B73.1: this is a standard that applies to the construction of end-suction pumps. It is the intent of this standard that pumps of all sources of supply shall be dimensionally interchangeable with respect to mounting dimensions, size and location of suction and discharge nozzles, input shafts, baseplates, and foundation bolts.
