Fluorine-Containing Elastomers Introduction

Desorption is a phenomenon whereby a substance is released from or through a surface. The process is the opposite of sorption (that is, either adsorption or absorption). This occurs in a system being in the state of sorption equilibrium between bulk phase (fluid, i.e. gas or liquid solution) and an adsorbing surface (solid or boundary separating two fluids).

Thermal conductivity (often denoted k , $\hat{\lambda}$, or $\hat{\rho}$) is the property of a material to conduct heat. It is evaluated primarily in terms of Fourier's Law for heat conduction. In general, thermal conductivity is a tensor property, expressing the anisotropy of the property.. Heat transfer occurs at a lower rate in materials of low thermal conductivity than in materials of high thermal conductivity.
